

A close-up, high-angle shot of a man with a beard and a white shirt, wearing a dark apron, kneeling on a wooden workbench. He is focused on his work, holding a claw hammer with a wooden handle and driving a nail into a light-colored wooden plank. The background is slightly blurred, showing a workshop or construction site with wooden beams and a blue structure. The lighting is warm and natural, highlighting the textures of the wood and the man's concentration.

PICARD

PRODUCT RANGE OVERVIEW

DER HAMMER. SEIT 1857

OUR RECIPE FOR QUALITY: EXPERIENCE AND PERFECTION MADE IN GERMANY

Professionals who use their tools day in, day out have always relied on the quality of PICARD. We achieve this thanks to long-standing, experienced employees who process the best in a high level of vertical integration. These include steel, for example, which is specifically produced for PICARD, or the types of wood, which are precisely matched to the respective application.

Production in the PICARD factory at the founding location in Wuppertal, Germany, has taken place for over 160 years in manufacturing quality. From development to production, we are committed to the quality promise that the name PICARD stands for.

This overview shows a small selection of our range. In the hammer sector, it is the largest in the world - and therefore undeniable evidence of our expertise.

ALUTEC®: LESS WEIGHT, MAXIMUM IMPACT FORCE

- > Hybrid hammer made of aluminium and C45 steel
- > Low weight with impressive impact force

The aluminium and steel parts of the AluTec® hammers are inseparably connected.

PICARD is breaking new ground with its AluTec® hammers. Aluminium and robust C45 steel are combined to create a very special, highly-efficient hammer. Although the roofing hammer's weight of just 730 g is a distinct benefit when carried on a tool belt, it is the robustness and impact force – in no way inferior to that of an all-steel hammer – that are most convincing.

MASTER RANGE: FINEST FOR GRAFTERS

The leather handles gradually adapt to the hand. During work they absorb moisture and then release it again.

- > All-steel hammer forged from a single piece
- > Genuine leather handle

PICARD steel hammers are true masterpieces among tools. Supreme-quality materials result in a product that can cope with the very highest demands. As solid steel hammers, they deliver maximum force – for greater efficiency with every single stroke. The grips are either made of the finest, untreated core leather or from two-component plastic material. Uncompromising tools that delight at first glance and continue to impress users every time they are picked up – and are also admired by those who are merely able to look on.

MASTER HAMMERS: ROBUST CLASSICS

PICARD Carpenters'
Roofing Hammers:
the all-rounders

- > Tubular handle made of chrome-molybdenum steel
- > High-strength connection of head and handle

The best materials skilfully combined and connected so as to be absolutely secure: that's what a classic tool should be like. Here, the latest technology meets the traditional handwork. A carefully-fashioned and forged hammer head sits unshakably on a seamless, wrought drawn tubular handle. These tools will remain securely in your hand thanks to their handles, designed out of vibration-damping and non-slip plastic. Every time they are used, they underline what craftwork is all about.

BLACKGIANT®: WHEN MAXIMUM SAFETY COUNTS

- > C45 tubular steel
- > Inner tube for more stability

An additional inner tube provides increased stability when applying leverage.

It is in work situations where even greater safety is called for – on the roof or on scaffolding – that BlackGiant® is really in its element. The cleanest finish on the head ensures that it can always be used safely, even in the most difficult situations. And when the going gets tough, the additional inner tube provides a level of breaking resistance that exceeds all standards. The BlackGiant® scores further points with its patented connection between head and shaft, and the special orange handle, which guarantees the best grip, good damping and effortless work – every time it is picked up and used, hour after hour, year after year.

STANDARD SERIES: BETTER THAN THE REST

- > Robust and durable thanks to C45 tubular steel
- > Wide range for every application

Where many manufacturers stop, we begin. Thanks to an ergonomic and solid grip, daily work becomes a safe experience. The standard series has optimally formed hammer heads for every field of application, which are permanently joined to the shaft. Every time they are picked up, they demonstrate what is meant by PICARD quality.

PROBLEM SOLVERS: INVENTIVE SPIRIT MEETS TRADITION

The PICARD Chisel
304½ in use

- > Special tools for efficient working
- > Handle made from high-quality chrome-molybdenum steel

The problem solvers are special tools that even impress experienced craftsmen: no more slipping on smooth surfaces, optimal traction even in difficult conditions – and all without time consuming tool changes. Only those who understand how craftsmanship works, can develop such tools.

When it comes to maximum safety at the workplace, only the very best quality will do. The SecuTec® by PICARD is a clear leader here. With its legally protected head connection system, it is redefining the standard. The best steel and wood, a first-class finish by staff with decades of experience and legendary PICARD quality since 1857 make the SecuTec® hammer the only option for those persons where only the best is good enough.

BLACKTEC®: ROBUST AND UNSHAKABLE

The glass fibre core
makes BlackTec®
hammers extremely
robust tools

- > Break-resistant glass fibre core
- > Anti-slip three-component handle

The PICARD BlackTec®
Riveting Hammer 327
in use

The hammers of the PICARD BlackTec® series are designed for tough applications. The core of the three-component handle is made of fibreglass so as to distinctly absorb shocks notably. The handle and the shaft are firmly and permanently connected. A non-slip coating of soft plastic and the handle's ergonomic design ensure convenient and safe handling – even with wet or oily hands. And of course the steel used also comes up to the well-known, high PICARD quality standard.

BLACKTEC® THE RANGE

The right tool for every purpose: BlackTec® hammers are available in a wide range of models and weights – precisely matched to the specific application.

A tinsmith with a beard, wearing a dark jacket, is kneeling and working on a large, reflective metal sheet. He is using a pair of shears to cut the metal. The background is a bright, cloudy sky. The overall scene is well-lit, emphasizing the precision and craftsmanship of the work.

TINSMITHS' TOOLS: FOR THE GREATEST CHALLENGES

- > The best wood and steel qualities
- > Precisely manufactured, offering a wide range

When it comes to precise work, it's not just a steady hand and knowledge of the material that is required. Anyone who works with sheet metal knows that only the best, precisely manufactured tools can achieve optimal results. The tradition of the craft is matched with the experience and quality standards of which we at PICARD manufacture our tinsmiths' tools.

TINSMITHS' TOOLS: THE RANGE

Sheet metal processing requires a variety of tools. Only if they are precisely manufactured – as is the case with PICARD – can good results be achieved.

PICARD bumping
tools in use

PERFECT: BUMPING TOOLS BY PICARD

- > Optimal steel quality and hickory handles
- > A wide range of head shapes for all jobs

The quality of a bumping hammer plays an important role in car body work, especially when removing dents and bumps from vehicles. Only high-quality hammers guarantee precision and efficiency. They enable optimal control during sheet metal processing.

PICARD bumping hammers are characterised – like the hand anvils and dent removal tools by PICARD – by high-quality materials and a precise finish. With a wide variety of shapes, they fulfil the specific requirements of the various working steps.

This ensures that professionals can utilise their skills optimally – for the best results.

BUMPING TOOLS: THE RANGE

The range of professional bumping tools is extremely extensive. It convinces thanks to precisely designed tools and high-quality handles made from hickory wood.

**CLEVERLY DESIGNED,
IDEALLY SHAPED AND
ROBUST: BLACKGIANT®
BAR AND PRO BAR**

- > Designed for maximum efficiency
- > Maximum stability for professional applications

BlackGiant® Bars and BlackGiant® Pro Bars are the nail pullers from PICARD for particularly tough use. The ingenious design extends the range of applications to places where conventionally shaped nail bars have to give up: in narrow crevices, close to vertical surfaces and where high leverage forces place maximum demands on the quality of the material.
